

Research Investigator

Clinical Trials, Offered by You

Bring clinical research opportunities to your patients; join our Community Trial Network.

Mission Driven, Just Like You

Care Access is on a mission to increase access to clinical trials for patients who have traditionally been left out of the research process. Clinical trials are needed for every new therapeutic option and are the key to unlocking the future of medicine.

The Community Trial Network

Our innovative approach to clinical trial delivery is enabling community-based physicians to engage in research studies. Community-based physicians bring a valuable perspective to the drug discovery process through intimate knowledge of their patient populations and their connection to the local communities. Care Access partners with community-based practices and healthcare centers in urban, suburban, and rural settings to bring clinical trials into their communities through our Community Trial Network. The Community Trial Network includes Care Access research sites, research investigators, and Trial Access Partners.

Our Research Investigators

Whether they are seasoned clinical researchers or new to the field, we partner with community-based physicians interested in incorporating research into their practice. Based on their expertise in clinical trials, trial fit, and level of interest, a physician can act as a Principal Investigator (PI) or a Sub-Investigator (working in partnership with a PI) to bring clinical trials into their practice. Care Access takes on the responsibilities of preparing the research space, trains the physician on the duties of an investigator, and supports the ongoing administrative management of the research program. Investigators focus on patient care while they advance the future of medicine.

Care Access: At-a-Glance

300+

Studies

across multiple
therapeutic areas

450+

**Clinical Research
Professionals**

here to support you
and your patients

100+

**Sponsor
Relationships**

including 14 of the top 15
pharmaceutical companies

86%

of Patients

say they want to learn about clinical trials

Here's why:

- Opportunity to contribute to science
- Chance to learn more about their medical condition
- Access to investigational therapies not yet available
- Closer health monitoring by healthcare professionals
- Coverage for the transportation cost

As a Research Investigator, you will:

- Lead clinical trials from a dedicated research space in or near your clinic
- Elevate your practice by providing access to new investigational therapeutic options for your community
- Maintain your relationship with your patients and give them ways to contribute to science
- Help decrease health disparities and improve patient outcomes
- Bring your real-world community provider perspective to the scientific discovery process
- Strengthen your professional network and exchange ideas and knowledge
- Receive compensation for study-related activities

What Care Access Does:

- We work with biotech and pharmaceutical sponsors globally to source research opportunities for your practice
- We partner with you to select trials suited for your patient population
- We invest in all the infrastructure needed to conduct research at your site or nearby clinics
- We provide dedicated research staff, trial recruitment, and other study administrative support, so you and your staff can focus on patient care

Become a Research Investigator

Step 1

You connect with us to determine if your practice is a good fit for upcoming research projects

Step 2

We prepare your practice and provide training

Step 3

You offer new research opportunities to your patients
