

## TEMPLE LUNG CENTER

# NATIONAL TRANSPLANT LEADERS PROVIDING BETTER OUTCOMES

As the country's leading referral destination for lung transplantation, the Temple Lung Center has established a reputation for taking on the most complex cases - frequently transplanting patients who find themselves outside standard eligibility criteria. And while the average transplant case may present more challenges for the team - including higher age or BMI, or concurrent health conditions - **Temple consistently surpasses national benchmarks in patient outcomes.**

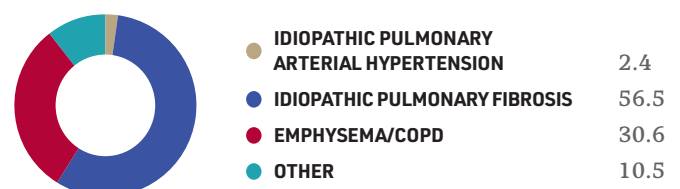

### Experience Matters

Temple provides lung transplantation for patients with chronic, end-stage lung diseases who have failed maximal medical therapy. The most common diagnostic indicators include interstitial lung disease (including idiopathic pulmonary fibrosis), COPD and advanced emphysema.

For patients who face lower survival rates, lung transplantation offers an opportunity to extend and expand their quality of life. For example, in adults with IPF who are 65 and older, median survival (nationally) is 3.8 years from time of diagnosis without medical treatment. Post transplant, these patients do markedly better, with one-year survival at 85.3%; three-year survival at 67%; five-year at 54.3%; and 10-year at 32.8%, based on national statistics.

- **Transplanting Your Patients Faster.** Temple has the fastest time to transplant rate than any lung transplant center in the region, helping more patients.
- **Fast, Seamless Process.** Our transplant team coordinates every step of care, from consultation through to admission, transplantation, and post-operative lifestyle care. We offer accelerated transplant evaluations so patients and their families can return home as soon as possible.
- **Co-Managing Lung Transplant Patients.** The Temple Lung Center is committed to keeping you informed about your patients. We have a dedicated team of Key Account Managers who can assist you with the needs of your patients, help you resolve any problems quickly, and coordinate contact with Temple lung transplant physicians and staff. Our goal is simple—to provide a level of communication that equals our level of patient care.
